15

Vacuum Fixing Devices for Vibrators Series VAC

- Quick mounting without bolting or welding
- Strong connection due to high vacuum
- Can also be used on curved or uneven surfaces
- Optional air economizer
- ATEX conform and stainless steel versions available
- Customized versions possible

VAC 10 with NCT 4

VAC 15 with PKL 740 ST

VAC 30 with NTS 50/04

Application areas

The vacuum fixing devices VAC are designed for quick attachment of vibrators to smooth or, under certain circumstances, uneven and curved surfaces. The special feature of the vacuum fixing device is simple fastening without welding or screw connections. The brackets together with vibrators are used, for example, for emptying transport containers, plastic containers and for cleaning pipes.

Design and function

The appropriate vibrator is screwed onto the vacuum mount and both are supplied with compressed air by one of the optional Netter hose sets. As soon as compressed air is supplied to the VAC, the unit sucks firmly, thus ensuring a force-locked connection between the vibrator and the substrate. The hose set with the air-saving circuit "S"

holds the vibrator during its rest period at a reduced vacuum. Air consumption is thereby reduced by more than 30 percent. When starting the vibrator, the mount automatically generates full vacuum. ATEX-compliant brackets and appliances with a stainless steel plate are available.

Permissible operating conditions

Drive medium:

Compressed air or nitrogen (Filter $\leq 5 \mu\text{m}$)

Operating pressure: 2 bar to 6 bar

Ambient temperature: -10 °C to 60 °C

NetterVibration offers the right accessories required for the mounting, installation and control of vibrators and interval impactors.

Netter provides solutions.

Consult our experienced application technicians.
